Week 6 I &T I.T 7 Demonstrate use of Polymorphism in a program

using interface

```java
package Interface;

public interface ILoyal {
    double twoPercentOff(double rate);
}
```

Implement interface

```java
package Customer;

import Interface.ILoyal;

public class LoyalCardCustomer extends Customer implements ILoyal{

    public LoyalCardCustomer(double wallet) {
        super(wallet);
    }

    @Override
    public double twoPercentOff(double rate) {
        Double percentage = 1 - rate;
        return percentage;
    }

}
```

Using the ILoyal interface

```java
public void applyLoyalDiscount(ILoyal iLoyal){
    this.total *=iLoyal.twoPercentOff( rate: 0.02);
}

public void chargeCustomer(Customer customer){
    Double total = customer.getWallet();
    total -= this.total;
    customer.setWallet(total);
}
```
